RE: ERF 3535 SECUNDA FLOODLINE

The 1:100 year flood line levels were calculated and plotted to determine if the flood line will encroach the proposed erven below Goddefroy road. The catchment area measured 1283 Ha and the 1:100 flood flow is 140 cumec.

The picture below indicate the position of the 1:100 year flood line.

The picture below indicate the profile for the flood line.

We trust that the above confirms that the 1:100 year flood line should not affect the proposed subdivision of erf 3535.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'B.C. Theron', written in a cursive style.

B.C. Theron. Pr. Eng.
